

Scope of Companies

The 1000 companies will be selected across two primary baskets:

Basket A: Specialty Manufacturing (Core Focus)

This includes companies with deep specialization, strong R&D, and high entry barriers:

- Specialty Biotech (enzymes, probiotics, fermentation-based products)
- Diagnostics & Life Science Tools (kits, reagents, antibodies)
- Custom Synthesis & Specialty Chemicals (pharma/agro intermediates)
- Performance Chemicals (coatings, additives, surfactants)

Basket B: Adjacent Specialty (Secondary Focus)

This includes closely related, innovation-driven industries:

- Complex APIs & Regulated Pharma (HPAPI, peptides, injectables)
 - Medical Devices (implants, surgical tools, wearables)
 - Agri-tech (hybrid seeds, biofertilizers)
 - Nutraceutical Ingredients (plant protein, extracts)
 - Industrial Sensors & Instrumentation (automation, IoT)
 - Animal Health (vaccines, feed additives)
-

Sourcing Strategy

1. Primary Data Sources

- Company websites and annual reports
 - Industry reports and sector databases
 - Government and regulatory filings
 - LinkedIn and professional directories
-

2. Secondary Data Sources

- Research articles and market studies
 - Investor presentations
 - Industry blogs and expert insights
-

Selection Criteria

Each company will be evaluated based on:

- **Specialization** → Niche products vs commodity
 - **Business Model** → B2B, export-oriented, or innovation-led
 - **R&D Intensity** → Presence of innovation or patents
 - **Market Position** → Leadership or strong positioning
 - **Scalability** → Growth potential and global demand
 - **Regulatory Complexity** → Entry barriers (higher = better)
-

Scoring Framework

Each company will be scored on a scale (e.g., Low / Medium / High or numerical scoring) based on:

- Product complexity
- Margin potential
- Industry attractiveness
- Competitive advantage
- Risk level

This ensures objective comparison across all 1000 companies.

Execution Plan

Step 1: Initial Longlist (1500–2000 companies)

- Broad sourcing across all segments
- Removal of clearly irrelevant or low-quality businesses

Step 2: Filtering (Down to 1000 companies)

- Apply selection criteria
- Focus on specialization and scalability

Step 3: Categorization

- Assign each company to Basket A or Basket B
- Further divide into sub-segments

Step 4: Data Structuring

- Store company data in CSV format
 - Include:
 - Company name
 - Sector
 - Sub-segment
 - Score
 - Key notes / evidence
-

Deliverables

- **CSV file** with 1000 companies (scored + categorized)
 - **Methodology document** explaining approach
 - **Supporting evidence** for company classification
 - **Optional code/tools** used for data collection
-

Challenges & Mitigation

Challenge	Solution
Data availability	Use multiple sources
Misclassification	Cross-check with 2+ references
Bias in scoring	Use standardized framework

Expected Outcome

- A **high-quality, research-backed database** of 1000 companies
 - Clear segmentation across specialty industries
 - Actionable insights for analysis, investment, or research purposes
-

Conclusion

This structured approach ensures that the final list of 1000 companies is not just large, but **meaningful, high-quality, and strategically segmented**, focusing on industries with strong long-term potential and competitive advantages.
